

Baltimore In Depth

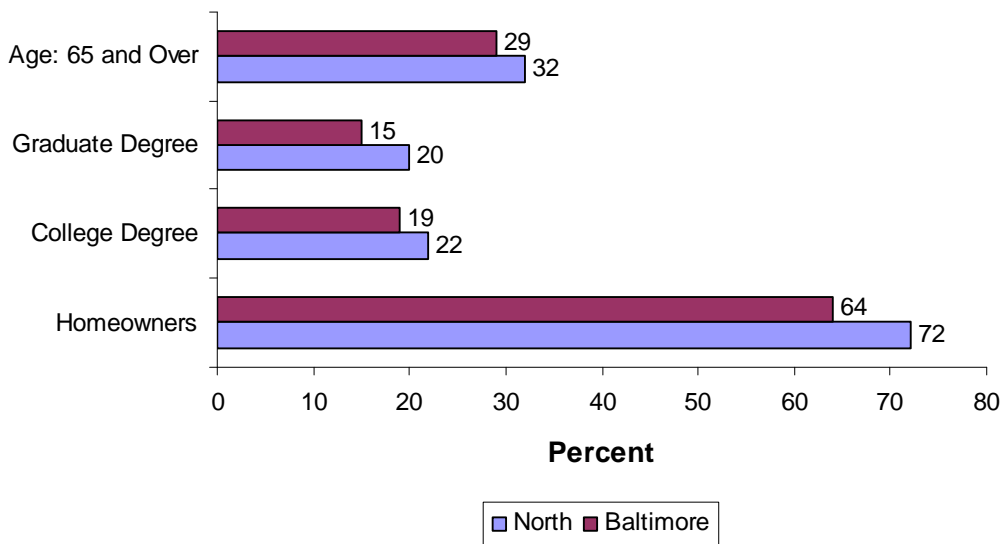

A Closer Look at the 2010 Baltimore Citizen Survey Results
 City of Baltimore/Department of Finance/Bureau of the Budget and Management Research

June 2011

Vol.1 Issue 9

The 2010 Baltimore Citizen Survey asked 1,800 respondents a series of questions to measure their satisfaction with the services offered by the City of Baltimore and the quality of life in the City. This report focuses on individuals **who live in the Northern District**.

Demographics

Key Findings

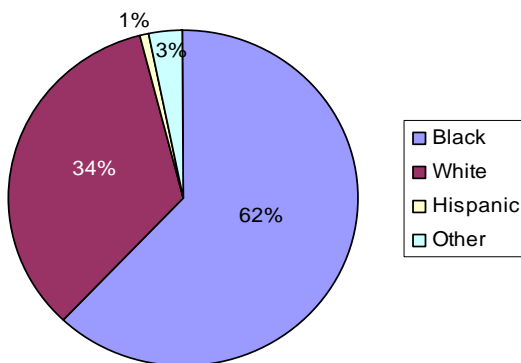

Respondents from the Northern District were more likely than the population as a whole to:

- Have made contact with a City employee in the last year.
- Have visited a City-run library in the past year.

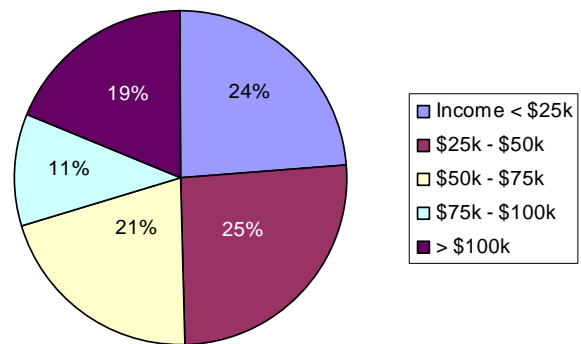

The Northern Planning District differs from the population of Baltimore as a whole in terms of the proportion of homeowners, highly educated and high income individuals, and individuals over the age of 65.

These residents are also more likely to have college and graduate educations, possibly leading to the higher proportion of incomes over \$75,000 and the higher proportion of homeowners.

North Baltimore Racial Makeup

North Baltimore Incomes

Northern District

The Northern Planning District encompasses the corridors up Greenmount Avenue, North Charles Street, and Falls Road. Druid Hill Park is in the district's southwest corner, while the southeast corner is made up of the Barclay and Better Waverly neighborhoods and Charles Village.

The district contains the Johns Hopkins University Homewood Campus between Hampden and Charles Village. The District also contains Roland Park and North Roland Park, a possible reason for the larger proportion of higher incomes.

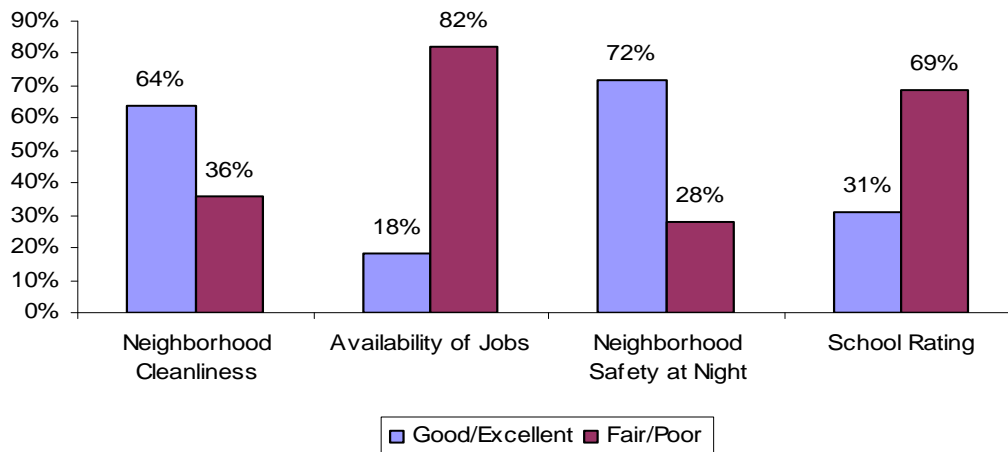

Findings

Of the respondents in the Northern District, 32% said that they visited a City-run library at least monthly, while only 27% of the population as a whole visited a library as often.

Northern District residents were also more likely to make contact with a City employee, with 58% of respondents having some contact in the prior year. Only 52% of the population as a whole had a similar contact rate.

In addition, 72% of respondents said that they felt safe at night in their neighborhoods. This is significantly higher than many of the other planning districts.

Northern District Responses

The Baltimore Citizen Survey is an annual survey, with 1,800 respondents, and a margin of error of $\pm 2.5\%$. For more information on the survey, and to read full reports, please visit www.baltimorecity.gov/citizensurvey.
